PROFESSIONAL SUMMARY

AI Engineer with 2+ years of experience designing and deploying end-to-end generative AI and agentic systems — from LLM-powered chatbots and RAG pipelines to autonomous multi-agent workflows. Built production systems achieving up to 90% task automation accuracy and 40% reduction in manual workflows, backed by strong FastAPI/Docker backend engineering and hands-on LangGraph and prompt engineering expertise.

TECHNICAL SKILLS

- **Generative AI & NLP:** LLMs, RAG (Multi-RAG, Hybrid RAG, Agentic RAG), Prompt Engineering, Chatbots, Streaming Inference
- **Agentic AI:** LangGraph, LangChain, Tool/Function Calling, MCP Servers, Multi-Agent Orchestration, N8N
- **ML/AI Platforms:** OpenAI, Vertex AI, Ollama, Hugging Face, Scikit-learn, LangSmith
- **Backend & Deployment:** FastAPI, Flask, Docker, REST APIs, Streamlit, Firebase
- **Programming & Data:** Python, SQL, MySQL, MongoDB, NumPy, Pandas, Dart, Java
- **Web:** HTML, CSS, JavaScript

PROFESSIONAL EXPERIENCE

AI Engineer | Plusinfosys — Jan 2024 – Present

- Architected and deployed end-to-end LLM-powered applications — conversational AI and multi-agent systems — converting natural language into automated, actionable outcomes for enterprise clients.
- Engineered Multi-RAG, Hybrid RAG, and Agentic RAG pipelines using LangGraph, Vertex AI, and N8N, improving retrieval accuracy and enabling seamless multi-tool orchestration.
- Built scalable FastAPI backend services for real-time inference and streaming responses; developed Streamlit dashboards to monitor model performance and system health in production.
- Partnered with cross-functional teams to design and ship production-ready AI architectures, streamlining client workflows end-to-end.

PROJECT HIGHLIGHTS

PMPeople AI Solutions (SaaS Platform)

- Launched a suite of AI-powered assistants — project Q&A, documentation, and action-based automation — for a SaaS project management platform.
- Built conversational agents that translate natural language into platform actions (task creation, updates, scheduling).
- Developed a Document Intelligence AI that auto-extracts milestones and work packages from client requirement documents.

- Created a "Virtual Project Manager" AI model to automate end-to-end project planning and coordination.

AI-Powered Architectural Sketch-to-CAD Converter

- Built a computer vision system converting hand-drawn architectural sketches into production-ready AutoCAD DXF files, achieving 90%+ element-detection accuracy.
- Designed a pixel-to-real-world coordinate mapping algorithm to preserve accurate dimensions in generated CAD layers.
- Extended the system with a generative AI pipeline producing multiple floor-plan layouts from client constraints (plot size, room count, area).
- Deployed via scalable FastAPI services, significantly cutting manual drafting time.

Enterprise AI Chatbot — AISlytics (3D Warehouse Platform)

- Built an enterprise chatbot integrated with a Three.js 3D warehouse visualization system, enabling natural-language queries on aisle, rack, and inventory data.
- Designed a Hybrid RAG pipeline combining knowledge graphs, semantic vector search, and BM25 for high-accuracy retrieval across structured/unstructured data.
- Implemented persistent multi-turn memory for context-aware conversations.
- Containerized the full stack with Docker for consistent, production-grade deployment.

Autonomous Contact Intelligence Agent

- Built an autonomous agent for deep-web contact intelligence, automating extraction of role, workplace, and contact details.
- Engineered a recursive agentic search loop with a containerized SearXNG instance and custom scrapers (LinkedIn, GitHub, portfolios).
- Added intelligent validation and filtering to ensure accuracy, supporting lead generation and networking research at scale.

AI Product Marketing Assistant

- Built an AI marketing agent automating content research (Perplexity API, Clay, web scraping) and multi-channel publishing (LinkedIn, X, Reddit, Medium).
- Cut content creation time by 80% and increased email campaign reply rates by 30% via personalized outbound automation.

HR Mail Intelligence System

- Built an on-premise, locally-hosted LLM email classification system for a pharmaceutical client, auto-categorizing 20+ HR inquiry types (recruitment, payroll, leave, compliance) while preserving data privacy and regulatory compliance.

CRM-Integrated Task Automation

- Integrated messaging platforms with CRM to auto-classify client messages into tasks, bugs, and change requests, cutting manual triage time by 40% for project managers.

EDUCATION

B.E. in Information Technology - CGPA 8.04/10

Gandhinagar Institute of Technology, Gandhinagar, Gujarat

2020 – 2024
